Dear Sirs and Madams,

Mücke-motorsport had the possibility to hold three test day at different time and two different tracks with Kimmy Larsson. We experienced a young, strong motivated driver with a very good ground speed and a good over view at all time. He showed enough aggression for a good brake performance, intelligent speeding at double corner or chicanes and great courage especially for fast corners.

At our first meeting on 16 of September we start our tests after seat fitting, a look in previous data's, videos from onboard camera and for sure a track walk as the normal preparing before we enter the track. The using of the car, specially braking with the left foot, fast shifting and different kind of steering at different speed at corners was basically solved after this first day.

The second day at the same track we fixed the using of the car finally and had as the biggest goal the task to realize new tires at the car, which needs the understandings of the car and the process to use the extra grip.

The last test we had at Hockenheim wich will hold the German Grand Prix 2010 as a welcome possibility to run at this track. The typical problems at difficult corners for example in the stadium there was our task at this test. Again Kimmy showed his great talent to manage different requirements and had in the end of those days the fasters lap time in-between both test days from all drivers there.

As you can see in our history we had lots of high talented drivers in our junior classes and supported a couple of actually formula one driver from now. We are willing and able with a solid education and some tests this year to prepare Kimmy for coming season to hold in the end success and the chance to fight for the rookie cup. We will underline our interest to start with him in the formula BMW Europe champion chip as one of the most effect full junior classes on international platform and interest.

With best regards,

Frank Lucke.  
Mücke-motorsport
